Develop Mobile Cross-Platform Apps For Business (with React, Ionic, JS)

Internship / Bachelor-/Master-Thesis (m/f/x)

mobilion.eu develops mobile information technology for fire and rescue services at the heart of Karlsruhe. The mobilion.eu team develops based on proven best practices with having many years of active experience in firefighting and rescue.

We seek students (m/f/x) of information science, business information science or related, who show bursting motivation and have the will to achieve a lot together with the founders.

The Challenge
- Best-in-class mobile apps feature superior user experience and performance combined with high interactivity.
- Cross-platform apps enable re-using business logic & user interfaces across mobile platforms (iOS, Android)
- The challenge: Design & implement mobile apps for business processes & demonstrate superior app performance.

Your Tasks
- Plan architecture & components based on requirements
- Develop cross-platform mobile apps using mobile frontend web frameworks such as React, Ionic & JavaScript
- Deploy apps on Apple iOS & Google Android using Cordova/ReactNative cross-platform framework
- Optionally: Assist in backend development (node.js)

Your Profile
- Team player with practical experience in frontend web development & frameworks such as React & Ionic
- Passion, a keen interest in solving problems while valuing the user's perspective
- Humor (healthy dose)

We look forward to your application!
Make use of manifold options to drive things and benefit from quick decisions in a young, creative and international team in a dynamic startup environment. Grow through intensive personal exchange. This position is also available as internship, internship placement (Praxissemester) or work-student placement (Werkstudent).
